malaria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to non-natural variants of a C-terminal fragment of a Plasmodium merozoite surface protein-1 (MSP-1). The non-natural variants have reduced affinity for at least 1 antibody capable of blocking a second antibody that inhibits the proteolytic cleavage of Plasmodium MSP-1_4_2, and has the same affinity for at least one third antibody that inhibits the proteolytic cleavage of Plasmodium MSP-1_4_2, and has the same affinity for at least one third antibody that inhibits the proteolytic cleavage of Plasmodium MSP-1_4_2, compared to natural MSP-1_1_9. The non-natural variants of the present invention are useful for immunising a mammal against malaria, and can be used to treat malaria. The present sequence is the MSP-119

                                                                                                                                                                         This is the nucleotide sequence encoding a chimeric protein comprising nucleotides encoding amino acids 1-32 of the Plasmodium vivax merozoite surface protein 1 (MSP1) linked to the nucleotide sequence encoding the 19 kD C-terminal fragment (p19) of MSP-1 from Plasmodium falciparum. p19 is the C-terminal fragment of the 42 kD MSPI from Plasmodium species. The recombinant protein can be used for the production of anti-malarial vaccines, where the p19 fragment provides a high level of protective immunity since it includes epitopes not presented in the p42 fragment.

The invention relates to a variant DNA sequence useful in DNA vaccines The DNA sequence encodes a naturally occurring protein such as C3d whiby virtue of third base redundancy and other variations permissible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4703
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nucleotides encoding amino acids 1-32 of the plasmodium vivax merozoite surface protein 1 (MSP1) linked to the nucleotide sequence encoding the 19 kD C-terminal fragment (p19) of MSP-1 from plasmodium falciparum. p19 is the C-terminal fragment of the 42 kD MSP1 from Plasmodium species. The recombinant protein can be used for the production of anti-malarial vaccines, where the p19 fragment provides a high level of protective immunity since it includes epitopes not presented in the p42 fragment.
                                                                           Novel variant DNA sequence useful in DNA vaccine, encodes occurring protein and comprises a sequence non-identical occurring DNA sequence encoding the protein -
                                                                                                                                                                                                                                                                                    WO200177324-A1
                                                                                                                                                                                                                                                                                                            Plasmodium falciparum
                                                                                                                                                                                                                                                                                                                                      C3d;
                                                                                                                                                                                                                                                                                                                                                                          Plasmodium
                                                                                                                                                                                                                                                                                                                                                                                                   12-FEB-2002

The DNA sequence is useful in a DNA immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into a human or animal by administering the pharmaceutical composition in useful for introducing a DNA sequence encoding the pharmaceutical composition into the human or animal, where the administration results in a therapeutic effect on the human or animal. The present sequence is Plasmodium falciparum prMSP1.19 insert in pUC105-01 vector

                                                                                                                                                                                                                                                                                                                                                                                                  4645
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into a human or animal by administration in the pharmaceutical composition into the human or animal, where the administration results in a therapeutic effect on the human or animal. The present sequence is plasmodium falciparum PfMSP1.19-human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;

                                                                                                                                                                                                                                      4825
                                                                                                                                                                                                                                                                                                                                                                                                                                                     4585 AACATCTCCCAGCACCAATGCGTGAAGAAACAGTGCCCCCAGAATAGCGGCTGTTTCAGG 4644
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3147 BP; 869 A; 754 C; 834 G; 690 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a variant DNA sequence useful in DNA vaccines. The DNA sequence encodes a naturally occurring protein such as C3d which by virtue of third base redundancy and other variations permissible within an amino acid codon, is non-identical to the naturally occurring DNA sequence encoding that protein. The DNA sequence is useful in a DNA requence according that protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 16; Page 66-68; 87pp; English.

The DNA sequence is useful in a DNA immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring between into a human or animal by administering the pharmaceutical composition into the human or animal. The present sequence is plasmodium falciparum PfMSP1.19-human or animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 3147 BP; 869 A; 754 C; 834 G; 690 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a variant DNA sequence useful in DNA vaccines. The DNA sequence encodes a naturally occurring protein such as C3d which, by virtue of third base redundancy and other variations permissible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 16; Page 69-71; 87pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel variant DNA sequence useful in DNA vaccine, encodes naturally occurring protein and comprises a sequence non-identical to natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           09-APR-2001; 2001WO-GB01599

                                                            sequence encoding a naturally occurring protein into a human or animal by administering the pharmaceutical composition into the human or animal, where the administration results in a therapeutic effect on the human or animal. The present sequence is Plasmodium falciparum PfMSP1.19 mutant DNA used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                   Novel variant DNA sequence useful in DNA vaccine, encodes naturally occurring protein and comprises a sequence non-identical to naturally occurring DNA sequence encoding the protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4825
                                                                                                                            immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA
                                                                                                                                                                                within an amino acid codon, is non-identical to the naturally occurring DNA sequence encoding that protein. The DNA sequence is useful in a DNA
                                                                                                                                                                                                         The DNA sequence encodes a naturally occurring protein such as C3d we wirtue of third base redundancy and other variations permissible
                                                                                                                                                                                                                                                                                                                                                                  Steward
                                                                                                                                                                                                                                                                                                                                                                                                                    08-APR-2000; 2000GB-0008582

The DNA sequence encodes a naturally occurring protein such as C3d which, by virtue of third base redundancy and other variations permissible within an amino acid codon, is non-identical to the naturally occurring DNA sequence encoding that protein. The DNA sequence is useful in a DNA immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into a human or animal by administering the pharmaceutical composition into the human or animal by administering the pharmaceutical composition into the human or animal. The present sequence is plasmodium falciparum mutant protein into a buman or animal composition into a protein into the human or animal composition into a protein into a buman or animal by administration results in a therapeutic effect on the human or animal composition into a protein into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal composition into a buman or animal compos

The DNA sequence encodes a naturally occurring protein such as C3d which, by virtue of third base redundancy and other variations permissible within an amino acid codon, is non-identical to the naturally occurring DNA sequence encoding that protein. The DNA sequence is useful in a DNA immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into the human or animal by administering the pharmaceutical composition into the human or animal. The present sequence is plasmodium falciparum PfMSP1.19-human or animal. The present sequence is plasmodium falciparum PfMSP1.19-human or animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents a DNA encoding the Plasmodium vivax merozoite surface protein (MSP) C-terminal region. The C-terminal region of the merozoite surface protein has a strong antigenicity in malarial diseases. For diagnosis of malaria, recombinant proteins with enhanced antigenicity, obtained by addition of fusion proteins to surface protein C-terminal regions, can be reacted with serum or blood of a Plasmodium infected patient. Antigen-antibody composites will be formed, and these recombinant antigens provide a quick and reliable diagnosis of malaria, with good sensitivity and selectivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;

cc vaccine. A novel expression vector contains a sequence encoding an cc immunogenic merozoite surface antigen-1 peptide (MSA-1), and a cc mammalian signal (AAM34595-96) and/or anchoring sequence (AAM34598). CC The signal peptide contains 3 regions, a first or c region at the cc carboxy end of the peptide which serves as the cleavage site for a cc signal peptidase enzyme, a second or h region which is N-terminal to cc The c region (and highly hydrophobic), and a third region or n region cc The vectors (or analogues that express MSA-1 without either signal or can are used in vaccines to prevent or treat malaria caused by car used in vaccines to prevent or treat malaria caused by cc Plasmodium falciparum. The chimeric proteins can also be used in cc vaccines. The vaccinia vector expresses the antigen fragment for many cc days, or even years, generating a long-lasting immune response (humoral and/or cell-mediated) against the merozoite form of the parasite, in thumans or other animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 37

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                     stage major merozoite surface antigen (MSP-1) immunogenic peptide, cpl15MSP-1 (see AMS0527). The invention relates to a malaria vaccine comprising an expression vector, preferably a defective venezuela equine encephalitis (DVEE) viral vector system, which expresses pl15MSP-1 or its immunogenic fragment raises a humoral and/or cell-mediated response to the erythrocytic merozoite malaria antigen, protecting the patient from a subsequent malaria infection. The DVEE viral vector system continues to express antigen in the patient for a pariod of days, months or even years. Inclusion of a signal peptide and/or an anchor peptide sequence in the pl15MSP-1 antigen produces an immunogenic response which is significantly (i.e. at least about 2 times and as much as 100 times or more) greater than the immunogenic response produced by pl15MSP-1 which does not contain the signal or anchor peptide sequence.

                                                                                                                                                                                                                                                                                                                                                                                                       capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG187-ABL30511), expressed DNA sequences (ABLIG187-ABL30512).

(I) is especially useful in the treatment, prevention and reduction of malarial infection, as research or diagnostic reagents for the detection of Plasmodium species in a biological sample, and for conferring immunity against multiple stages of the malarial parasite. The antibodies produced are useful for the detection or measurement of antigenic epitopes derived from one or more stages in a life cycle of a parasite, particularly P. vivax. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc determinants, fragments or conservative substitutions, derived from more ct than one stage in a life cycle of a plasmodium vivax parasite. (I) is cuseful as a vaccine for stimulating an immune response, specifically a cc protective immune response that confers increased resistance to infection the plasmodium parasites, such as P. vivax. (I) is especially useful in the treatment, prevention and reduction of malarial infection, as cc research or diagnostic reagents for the detection of plasmodium species in a biological sample, and for conferring immunity against multiple cc stages of the malarial parasite. The antibodies produced are useful for the detection or measurement of antigenic epitopes derived from one or cc more stages in a life cycle of a parasite, particularly P. vivax. The core stages in a life cycle of a parasite, particularly P. vivax. The cc vaccine comprising the recombinant proteins, is cost-effective, health-cc incidence of malaria. The present sequence represents a synthetic gene cc vivac2 encoding the recombinant protein vivac2p, a multivalent and cmultivalent and

                                                                       멍
                                                                                                                                          В
                                                                                                                                                                            γĢ
                                                                                                                                                                                                                                                                                         Also described are: (1) nucleotide sequences (II) encoding (1); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and (II) are useful for the development of vaccines against P. falciparum infection. (1) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand complexity of the parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The meth is used: (1), for diagnosis and/or prognosis of side effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1485

therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABG13410-ABG54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in
disclosure of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel method for determining the degree of comethylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers comember, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers comember, of oligomers the degree of hybridisation to both classes is determined from the complete on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of concertion of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide cystems etc., particularly by detecting mutations or single nucleotide cypes and for investigating call differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

Canadian and continues of many C residues to be determined simultaneously.

Canadian and continues of the degree of cytosine methylation described in the described in the described in the hybridistic of the prognic DNA sequences used to illustrate the content of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                  methylation of a particular cytosine in a motification of the genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic CDNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the Classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory cystems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention

                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method
                                                                        systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP'S); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism SNP; cell differentiation; ds.
                                                                                                                                                                                                                                                                                                                                    is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 12; 56pp + Sequence Listing; 56pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2002-371829/40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Olek A,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-SEP-2000; 2000DE-1043826

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protective immune response that confers increased resistance to infection by Plasmodium parasites, such as P. vivax. (I) is especially useful in the treatment, prevention and reduction of malarial infection, as research or diagnostic reagents for the detection of Plasmodium species in a biological sample, and for conferring immunity against multiple stages of the malarial parasite. The antibodies produced are useful for the detection or measurement of antigenic epitopes derived from one or more stages in a life cycle of a parasite, particularly P. vivax. The vaccine comprising the recombinant proteins, is cost-effective, health-promoting intervention for controlling, preventing or treating the incidence of malaria. The present sequence represents the nucleotide sequence of a synthetic gene ViVAc2bias.
                                                                                                                                                                                                                                                                                                                      5376

                                                                                                                                                                                               4710
                                                                                                                                                                                                                                       5436
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to recombinant multivalent proteins (I) that stimulate an immune response to Plasmodium vivax. (I) comprises antigenic determinants, fragments or conservative substitutions, derived from more than one stage in a life cycle of a Plasmodium vivax parasite. (I) is useful as a vaccine for stimulating an immune response, specifically a protective immune response that confers increased resistance to infection
                                                                                                                                                                                                                                                                                                                                                         4590 CTCCCAGCACCAATGCGTGAAGAAACAGTGCCCCCAGAATAGCGGCTGTTTCAGGCATCT 4649
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful as infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5643 BP; 1584 A; 1197 C; 1503 G; 1359 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant multivalent protein comprising antigenic determinants derived from more than one stage in a life cycle of Plasmodium vivax, useful as a vaccine for treating, preventing and reducing malarial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 31-JAN-2000; 2000US-0179213

This gene has silencing activity. The qde-1 gene was isolated by mutational analysis of an al-1 transgenic strain. This strain had an albino phenotype resulting from post-transcriptional silencing of the endogenous al-1 gene. Reversion of this phenotype indicated a mutation in a silencing gene. The silencing gene, qde-1, could then be isolated. Modulation of qde-1 expression may be used to inactivate genes and to silence

GP900 fragments, fusion proteins and antibodies may also used for the diagnosis of Cryptosporidium parvum infections, and for the detection of the parasite in the environment. The present sequence represents the open reading frame (ORF) encoding a portion of the GP90 protein of the NINC isolate of Cryptosporidium parvum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          competitively inhibit sporozoite or merozoite attachment or invasion, and are also useful for the generation of anti-GP900 antibodies. The antibodies also inhibit sporozoite or merozoite attachment/invasion and additionally inhibit the binding of GP900 ligands to GP900. GP900 proteins, fragments and antibodies may therefore be used to treat or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cryptosporidium parvum, DNA encoding it, GP900 fragments, and fusion proteins comprising GP900 fragments. The invention also relates to the administration of GP900 or fragments thereof to a host to elicit anti-GP900 antibody production, and to a method of cryptosporidiosis treatment or prophylaxis comprising administration of anti-GP900 antibodies to an individual. Cryptosporidium parvum GP900 and GP900 fragments are able to competitively inhibit sporozoite or merozoite attachment or invasion, and

                                                                                                     3990
                                                                                                                                                                                                                                                                                                                                                                                         prevent cryptosporidiosis. Infection with Cryptosporidium is a common cause of diarrhoea in humans and causes life-threatening diarrhoea in immunocompromised persons. Cryptosporidiosis can be contracted from contaminated municipal water supplies (e.g., public swimming pools). It also a cause of disease in animals, resulting in financial losses in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to the GP900 glycoprotein of the protozoan Cryptosporidium parvum, DNA encoding it, GP900 fragments, and fu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ID
                    The present invention relates to a method of detecting Cryptosporidium biological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4470
                                                                                                                                          Detecting Cryptosporidium in biological and environmental samples and diagnosis of cryptosporidiosis involves, contacting the sample with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNI
